

Thank you for requesting the Manomet study - it was very informative. As a citizen of this state, I want to give you my feedback so that our state will be safe for living. We need to have no more large scale biomass plants - they need to be stopped immediately!

Please:

1. Stop using taxpayer funded "clean" energy renewable energy credits and incentives toward dirty wood burning biomass plants and instead, direct them towards genuinely clean energy alternatives such as solar, geothermal, appropriately located wind and hydro, and conservation and efficiency measures.
2. Stop permitting any new wood burning biomass electric plants - they need to not happen.
3. Take a harder look at the carbon impacts of CHP (combined Heat and Power) biomass plants. The Manomet study use unreasonable assumptions - they need to be more realistic.

Thank you very much!
